RE: Hearing Aid Evaluation Report for Pavithran A/L R. Ravi

Through my analysis of Pavithran A/L R. Ravi, 8 years of age, I diagnose him with profound bilateral sensorineural hearing loss, which prohibits him from hearing at all. He is currently wearing a pair of Widex Bravissimo Analog hearing aids that provide no assistance nor improvement to his hearing at all. His immediate family including his parents, and his school teachers have mistakenly believed that he is completely deaf and dumb.

A basic audiometric evaluation and hearing aid consultation has been performed. Otoscopy results shows that his ear canals and ear drums are normal. I have attached a copy of his hearing test results (audiogram) for reference.

Based on the severity of his hearing loss and his lifestyle needs, I have recommended a pair of Phonak ultra-power hearing aids to help salvage his residual hearing.

Pravithran was given a trial of these hearing aids. Much to his surprise, the results showed that these hearing aids had greatly improved his hearing and also his communication ability. Pravithran responded enthusiastically to the noise of hand clapping, paper crunching and his own voice. His father was amazed that his son could actually hear and was almost in tears.

I have included the cost of the hearing aids as clearly listed in the invoice.

From my evaluation of Pravithran, I have found him to be an intelligent boy that comprehends exactly what I explained to him through sign language. However, he cannot talk due to his inability to hear anything at all since he was young. It is therefore my recommendation that Pravithran be prescribed with the hearing aids as soon as possible, so that he may be able to hear and start learning the spoken language immediately.

Please do not hesitate to contact me should you require any clarifications.

Thank you,

Jenny Chong
